                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            à
                                                           The present sequence represents the Bacillus lion Y protease. The invention claims for enzymes covalently modified on their surface by the attachment of a large number of small polymeric molecules, e.g. the attachment of a large number of small polymeric molecules, e.g. to polyethylene glycols (PEG). The polymeric molecules are coupled to the N-terminal amino group and the amino groups of lysine residues found on the Surface of the enzyme. In the example glycol, the lion Y protease was modified using methoxypolethyleneglycol (mPEG) as the polymeric molecule. The N-terminal amino group and the amino groups of the fourteen lysine of the surface present on the surface of the lion Y protease were modified. Modification of the enzymes increases the stability and/or reduces the sensitising potential (allergenicity) of the enzyme, without significantly reducing enzymesic activity. Also, using a large number of relatively small polymeric molecules, rather than a few very large ones, provides a more even effect with reduced activity loss. The modified enzymes are claimed to be useful as components of a wide range of skin and hair care products, e.g. soaps, cosmetics, oreams, gels, libsticks, but gels, sun oils, shampoos, hair dyse, insect repellants, etc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is a Bacillus Lion Y enzyme, which is a protease capable of inducing an allergic response upon inhalation. The enzyme c be covalently coupled to a co-polymer comprising ethylene oxide (EO) a propylene oxide (PO) to reduce its allergenicity. This enzyme. Polymer conjugate can be used in industrial compositions such as detergents, cosmetics, toiletries, textile treatment compositions, agrochemicals, oral and dermal pharmaceuticals and food and feed additives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 NDVARGIVKADVAQNNYGLYGQGQLVAVADTGLDTGRNDSSMHEAFRGKITALYALGRTN

The protein may be used to produce the conjugates of the invention. The specification describes polypeptide-polymer conjugates which have improved washing performance and reduced respiratory allergenicity compared with the unconjugated polypeptide. The polymer provides, in water, a conformation that shields the molecular surface effectively, preventing association of antibodies that can induce an allergic reaction. The conjugates are used in industrial compositions, particularly detergent formulations (laundry, dishwashing or hard surface cleaners), but also in agricultural chemicals, skin care products (cosmetics and toileries), oral and dental pharmaceuticals, or textile processing and treatment compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180

The novel proteases have an increased detergency $ (34 - 38 ) compared to prior art alkaline proteases (31 and 23 ). This sequence represents a fragment of the alkaline protease SD-521 from Bacillus sp strain SD-521 (FERM BP-11162) described in the method of the

           production of such proteases. The protease are used in laundry and dishwashing detergents, for institutional and industrial cleaning, and for leather processing, as well as for debittering and enhancing the degree of hydrolysis of protein hydrolysates, for flavour development through hydrolysis of proteins, degradation of undesired peptides and enzymatic synthesis of peptides. They have enhanced stability towards oxidation under alkaline conditions, e.g. towards bleaching agents of the protease activity is diminished. Such cells can be used for the production of heterologous recombinant proteins

                                                                                                                                                                                                                        This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38) compared to prior art alkaline proteases (31 and 238). This sequence represents a fragment of the alkaline protease B-1 from Bacillus sp strain D6-(PERM-P1592) described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             360
                                                                                                                                                                                                                     This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38%) compared to prior art alkaline proteases (31 and 23%). This sequence represents a fragment of the alkaline protease A-2 from Bacillus sp NCIB12513 described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   300

This is the amino acid sequence of a novel protease of Bacillus sp. JP170 (NCIB 12513), as deduced from the nucleotide sequence of an isolated gene (see AAW82829. The entire protein, including the signal peptide and protein, and proteins and protease Y (see AAW8548) (Tom Bacillus. The invention provides vectors, recombinant host cells and methods for the recombinant production of the protease The protease is used in laundry and dishwashing detergents, for institutional and industrial cleaning, and for leather processing, as well as for debitering and enhancing the degree of hydrolysis of proteins, hydrolysates, for flavour development through hydrolysis of proteins, degradation of undesired peptides and in enzymatic synthesis of proteins, thas enhanced stability towards oxidation under alkaline conditions, cells, towards bleaching agents of the protease activity is diminished. Such provides mutent cells in which the protease activity is diminished. Such cells can be used for the production of heterologous recombinant proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       268
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120

```
This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency (34 - 38%) compared to prior art alkaline proteases (31 and 23%). This sequence represents a fragment of the alkaline protease KP9860 from Bacillus sp strain KSM-KP9860 described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NDVARGIVKADVAQNNYGLYGQGQVVAVADTGLDTGRNDSSMHEAFRGKITALYALGRTN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38) compared to prior art alkaline proteases (31 and 23%). This sequence represents a fragment of the alkaline protease A-1 from Bacillus sp NCIB12289 described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by oleic acid and they have a high stability to oxidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the range pH 6-12; (b) after 30 minutes at 40 deg. C it is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             325
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           625
stable over the pH range 6-11; c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proteases can be used as erzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the enzyme to be an effective component of washing compositions including bleaches. The present sequence represents an alkaline protease. (Updated on 20-MAR-2003 to correct DR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SVILVNDLDLVITAPNGTRYVGNDFSAPFDNNWDGRNNVENVFINSPQSGTYTIEVQAYN

The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by claicated and they have a high stability to oxidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the range 6-H 6-12; (b) after 30 minutes at 40 deg. C it is stable over the pH range 6-H, (c) its isoelectric point is 8.9-9.1, (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the bleaches. The present sequence represents an alkaline protease. (Updated on 20-MAR-2003 to correct DR field.) Alkali protease from Bacillus used in washing powders. Disclosure; Page 63-68; 71pp; Japanese. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
